```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Novel isolated NOVX polypeptide, and encoded polynucleotide, useful for treating cardiomyopathy, artherosclerosis, and cancer.

Claim 8; Page 7-8; 180pp; English.

The present invention relates to a new NOVX polypeptide having a 900 (NOV1), 4349 (NOV2), 940 (NOV3), 798 (NOV4), 865 (NOV5), or 331 (NOV6) residue amino acid sequence, as given in the specification. The novel polypeptide, and its encoding polynucleotide, are used to treat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              840
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               780
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         780
cardiomyopathy, atherosclerosis, cancer or a disease related to cell signal processing and metabolic pathway modulation, in a human. Detecting the polypeptide or polynucleotide is useful for identifying cancerous tissue. The antibody can be used to treat diabetes or cancer. The host cells can be used to produce non-human transgenic animals useful in drug screening. The present nucleic acid sequence is that of the human UNCS-like NOVI gene located on chromosome 13. This sequence encodes the human UNCS-like protein NOVI of the invention
                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                            300

2002-180074/23. P-PSDB; AAU85403 New isolated cytoplasmic, nuclear, membrane bound, or secreted polypeptide, useful for treating cardiomyopathy, atherosclerosis, infections, cancer, neurodegenerative, metabolic, hematopoietic and immune disorders.

Claim 9; Page 9-10; 213pp; English.

The invention relates to an isolated cytoplasmic, nuclear, membrane bound, or secreted polypeptide (NOVX, x= 1-14) their variants or mature form. Also included are the nucleic acids encoding the NOVX proteins, a vector comprising the nucleic acid, a cell comprising the vector, an antiporty and included are the nucleic acid, a cell comprising the vector, an antipox antibody and modulators of NOVX. NOVX, the nucleic acid and the control of the disorder is selected from cardiomypathy.

CC antibody are useful for treathing or preventing a NOVX-associated disorder, where the disorder is selected from cardiomypathy.

CC and metabolic pathway modulation, metabolic disorders, obesity, infectious disease, anorexis, cancer-associated cachexia, cancer, neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, infections disorders, hamatopoletic disorders, and the various of disease, bacterial, fungal, protocoal and viral infections, pain, collimia, asthma, hypertension, uninary retention, osteodystrophy, angina disease, multiple sclerosis, Albright Hereditary Osteodystrophy, angina collication, uninary retention, osteodystrophy, and psychotic and neurological disorders, including anxiety, collimia, manic depression, delinium, dementia, and dyskinesias, collimia, manic depression, delirium, dementia, and dyskinesias, concerterial functions disorders and collicated and curcles and collect and concerted and NOVX protein

```
This invention relates to the DNA and protein sequences of a novel

CC purified human netrin binding membrane receptor, UNC5H-1. The DNA

Sequence of the invention is useful as a probe for detecting a nucleic

acid encoding the UNC5H-1 protein in a biological sample. The sequences

of the invention are useful to screen for agents which decrease the

activity of the UNC5H-1 protein. The sequences are also useful for

activity of the UNC5H-1 protein. The sequences are also useful for

cscreening agents which regulate (composition containing the protein of

the invention. A pharmaceutical composition containing the protein of

the invention or a reagent that modulates the activity of the UNC5H-1 protein

cmay be useful for treating a UNC5H-1 dysfunction related disease such as

cancer or a central nervous system (CNS) disorders (e.g., parkinson's

disease, multiple sclerosis, stroke and Alzhaimer's disease). Fusion

C proteins comprising the UNC5H-1 protein are useful for generating

creatibodies and for in various assay systems, and the protein can be used

as a bait protein in a two-hybrid assay or three-hybrid assay. The method

cof the invention is useful for detecting a coding sequence encoding the

human netrin binding membrane receptor UNC5H-1 protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           87 ATGGCCGTCCGGCCCTGTGGCCAGCGCTCCTGGGCATAGTCCTCGCCGCTTGGCTC

The proteins of the invention may have antiinflammatory, cytostatic, immunosuppressive, antiiviral, anti-HIV, antiarthritic, muscular active general, anticonvulsant, nootropic, neuroprotective, antiallergic activities. The sequences of the invention may be used to produce REPTR agonists or antagonists, and the protein sequences may be used to raise

anti-REPTR antibodies. These molecules and the REPTR polynucleotides and polypeptides of the invention are useful in the diagnosis, treatment and prevention of gastrointestinal (e.g. gastritis, oesophageal carcinoma, crohn's disease, irritable bowel syndrome, ulcerative colitis), endocrine (e.g. hypothalamus disorder, Kallman's disease), autoimmune/ inflammatory (e.g. arquired immune deficiency syndrome (AIDS), rheumatoid arthritis, allargies, osteoarthritis, diabetes mellitus, multiple sclerosis, systemic lupus erythematosus), cell proliferative (e.g. cancer), developmental (e.g. Duchenne and Becker muscular dystrophy), neurological (e.g. epilepsy, Albeimer's disease, Huntington's disease) and reproductive (e.g. infertility, endometriosis) disorders. Numerous other examples of each disorder are given in the specification. The present sequence represents the human REPTRI CDNA sequence of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, petide therapy. The polypeptides have various cytokine-like activities, activity, tissue growth factor activity, immunomodulatory activity and activity, issue growth factor activity, immunomodulatory activity and activity, insue prowth factor activity, immunomodulatory activity and treatment of cancer, leuksemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acids encoding polypeptides with cytokine-like activities, useful

AAVS2941) and unc5h-2 (see AAVS2943) cDNAs are also claimed. Vertebrate UNC-5 proteins may be produced recombinantly from transfected host cells by utilising these vertebrate UNC-5 nucleic acids. The invention also provides unc-5 hybridisation probes and primers, vertebrate UNC-5 specific binding agents such as specific antibodies, and methods of making and using the subject compositions in diagnosis (e.g. genetic hybridisation screens for vertebrate unc-5 transcripts), therapy (e.g. gene therapy to modulate vertebrate unc-5 gene expression) and in the biopharmaceutical industry (e.g. as immunogens, reagents for modulating pharmacological agents for screening chemical libraries for lead pharmacological agents, etc.). (Updated on 25-MAR-2003 to correct PI 8X33333333333X8

```
The invention relates to YSG polynucleotide fragments for use in diagnosing and/or developing treatments for schizophrenia using chronic diagnosing and/or developing treatments for schizophrenia using chronic animal models. The polynepitoles and their encoded polypeptides are sequences can also be used for testing candidate compounds for any effect sequences can also be used for testing candidate compounds for any effect on the polypeptides. Anti-schizophrenic effects of a compound can be determined by measuring local cerebral glucose utilisation (LCGU) or comparing its expression level with that of a control group. The sequences are useful in the identification of genes associated with schizophrenic states and in the development of an antibody. The sequences of the invention include phosphodiesterase 1-alpha, calcium-independent alpha-latrotoxin receptors (CTEL)-1,2&3, epithelial discoidin domain receptor (TEKE), netrin receptor (WINCSHI), synapsins lA and AB and tumour necrosis factor (TMF) alpha. This sequence represents rat netrin receptor UNCSHI (YSG7) DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ų,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             266

Cc caenorhabditis elegans unc-5. unc5h-1 and unc5h-2 (see AAV52943) cDNAs were isolated from an embryonic brain cDNA library. The predicted comparients (see AAW78891) show similarity with UNC-5. They are predicted to be involved in cell migration and axon guidance, and are coharcterised as receptor proteins for netrins. Gene expression is conserved in regions where differentiating neurons are undergoing axogogenesis. Rat unc5h-1 (see AAV52940) and unc5h-2 (see AAV52941) cDNAs are also claimed. Vertebrate UNC-5 proteins may be produced recombinantly from transfected host cells by utilising these vertebrate UNC-5 nucleic acids. The invention also provides unc-5 hybridisation probes and caids. The invention also provides unc-5 hybridisation probes and cids. The invention also provides unc-5 hybridisation probes and cidsonosis (e.g. genetic hybridisation screens for vertebrate unc-5 antibodies, and methods of maxing and using the subject compositions in cidagnosis (e.g. genetic hybridisation screens for vertebrate unc-5 cranscripts), therapy (e.g. gene therapy to modulate vertebrate unc-5 cranscripts), therapy (e.g. gene therapy to modulate vertebrate unc-5 cranscripts), therapy (e.g. gene therapy to modulate vertebrate unc-5 inmunospens, reagents for modulating cell guidance, reagents for screening chemical libraries for lead pharmacological agents, reagents for screening chemical libraries for lead pharmacological agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GGACCCCTGGCGTCCTGCTCACCCGGCCAGTCATCCTGGCTATGGACCACTGTGGGGAG 1829

1718 GAGGTTGCCCCTAGCTGGCTGTCAGACCCTGCTGAGTCCCATCGTTAGCTGTGGACCCCC 1777 TGCCATACCCCGAGGGAAGATCTATGAGATCTACCTCACGCTGCACAGCCGGAAGACGT 246 The present invention describes 3 variants of human unc-5C cDNAs (unc-5Cb, unc-5Cc and unc-5C8) which correspond to alternatively spliced unc-5Cb, unc-5Cc and unc-5HS1 cDNA which shares homology with the Ratus norvegicus unc-5HS1 cDNA. Also described are assays based on protein-interactions between the unc-5 protein and a variety of different interacting proteins. The unc-5C variant cDNAs and unc-5HS1 cDNA are useful in methods for identifying compounds which reduce or inhibit the lethal phenotype associated with the expression of the unc-5 death domain in yeast. They are also useful in yeast two hybrid experiments for identifying unknown human cDNAs which encode proteins that interact with the human unc-5C protein. AAC90914 to AAC90971 and AABS0646 to AABS0693 represent sequences used in the exemplification of the present invention with 1478 CACACTGCACCACAGCTCTCCCACCTCTGAGGCCGAGGAGTTCGTCTCCCGCCTCTCCAC CACACTGCACCACACCTCCCCACCTCTGAGGCCGAGGAGTTCGTCTCCCGCCTCTCCAC TGCCATACCCCGAGGGAAGATCTATGAGATCTACCTCACGCTGCACAAGCCGGAAGACGT 1538 CCAGAACTACTTCCGCTCCCTGCCCCGAGGCACCAGCAACATGACCTATGGGACCTTCAA CTICCTCGGGGGCCGGCTGATGATCCCTAATACAGGTATCAGCCTCCTCATCCCCCCAGA variant; nematode worm; Gaps Three variants of human unc-5C cDNAs (unc-5Cb, unc-5Cc and unc-5C8) human unc-5HS1 cDNA, useful in yeast two hybrid experiments for identifying unknown human cDNAs which encode proteins that interact 3; Sequence 9700 BP; 2604 A; 2193 C; 2236 G; 2666 T; 0 U; 1 Other; Length 9700; 3; Indels Ъ; Verwaerde 44.8%; Score 1291.2; DB 4; 99.5%; Pred. AAM25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiinflammatory; antirheumatic; they are expressed in, such as: antiinflammatory; antirheumatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; central nervous system; virucide; antibacterial; endocrine; cardiant; central nervous system; virucide; antibacterial; endocrine; cardiavascular; antianaemic; antiagregant; hamostaid; vulnerary; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antiparkinsonian; and immunostimulant. The proteins and polynucleotides concoding them can be used in gene therapy, antisense therapy and vaccine production. The proteins and polynucleotides are useful for screening for production. The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rhemmatoid arbritis, septic shock, pancreatitis, cardiac dysfunction, conference, nulcimmunity, genetic diseases, hammatopoietic disorders, infections, autoimmunity, genetic diseases, hammatopoietic disorders, canaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, chinitis, asthma, diabetes, cancer, multiple sclerosis, depression, chinitis, asthma, diabetes, cancer, multiple sclerosis, depression, contemporative and contents and disease, parkinson's disease, neurodegenerative and contents and 
                                                                                                                                                                                                                                                                antiniflammatory; antirheumatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; central nervous system; virucide; antibacterial; endocrine; cardiant; central nervous system; virucide; antiagragant; haemostatic; vulnerary; antiulcer; osteopathic; eczema; dermatological; antiallergic; antiasthmatic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidiabetic; cytostatic; immunostimulant; gene therapy; antisense therapy; vaccine; inflammation; antianaphylactic; rheumatoid arthritis; septic shock; pancreatitis; cardiac dysfunction; neuropathology; cardiac anaphylaxis; autoimmunity; genetic disease; haematopoietic disorder; platelet disorder; asthma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          thrombocytopaenia; osteoporosis; severe combined immunodeficiency;

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  877
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 937
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    457
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  579
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                517
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               577
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              669
polypeptide and polynucleotide sequences have applications in diagnostics, forenatics, gene mapping, identification of mutations in tesponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
